

Professional Design -> Quality image -> **ULTRA Wide Coverage**

ULTRA Wide Converter Lens

M37 0.45x

Professional Quality

* Camera Lens set at maximum wide angle

* Camera Lens with M37 0.45x set at maximum wide angle

Specially designed for mega-pixel digital still and video cameras, the **M37 0.45x** ULTRA Wide angle conversion lens assist to capture the best quality pictures and video with true mega pixel sharpness without the unpleasant view of distortion, vignette, reflection or flare. All these are only made possible by a superior system of 2 element multi-coated high quality lens which seeks to maximize the true potential of your digital images and videography.

Most often, due to the limitation of the focal length, digital images captured by either digital still cameras or digital video cameras are not able to "widen" to include dynamic scenic view of landscape or group photography within a foreground of beautiful mountains, ancient buildings, historical buildings etc.

The **M37 0.45x** ULTRA wide angle digital conversion lens aims to resolve the above shortcoming by enabling the focal length of your digital video and still cameras to shorten by a factor of 0.45x, meaning a more dynamic wider view can be captured in a single image or within a short timespan during videography.

In technical terms, for example, at an original focal length of 35mm, when combined with the **M37 0.45x** Professional wide angle conversion lens, will produce a new extended focal length of 15.8mm – an ultra wide angle with an approximate diagonal angle of view at 110 degree.

PRO Optical System

2 element / 2 glass Optical System

Lens Coating

Multi-Coated Optical Glass Lens

Vignetting

Vignette Free Digital Image

Mega Pixel Image Quality

Superior clarity & mega pixel image reproduction

Wide Optical Coverage

Super Wide Coverage up to 15.8mm (35mm equiv)

Included Accessories

Soft Case & Plastic Caps

Technical Specifications

Magnification:	Wide 0.45x
Element/Group:	2E / 2G
Barrel Finishing:	Titanium
Lens Coating:	Multi-Coated
Rear Mounting Thread:	37mm
Height:	25mm
