

Digital LP Protector UV Series

Without Filter

With LP Protector Filter

Main Features

- Low profile filter ring ensures no vignette
- Thinner high index glass for maximum lens protection
- Glass rims are blackened to prevent internal reflection
- 20% lighter in weight as compared to conventional UV filter
- Inner threads for mounting lens cap or additional filter

SPECIFICATIONS

- Optics: High quality optical glass
- Housing: Low profile aluminum ring
- Mounting Diameter: 52mm to 77mm
- Filter Threads: Yes

Digital LP Circular Polarizer Series

Without Filter

With LP Circular Polarizer Filter

Main Features:

- Compact and light low profile self rotating ring
- 30% lower in height as compared to conventional polarizer
- No vignette when used on wide angle lens
- Increase color saturation of digital pictures
- Removal of reflection from non-metallic surfaces
- Black matt filter ring prevents internal reflection
- Inner threads for mounting lens cap or additional filter

Description

The new Low Profile (LP) circular polarizer filter is design exclusively for usage on digital cameras. This high quality circular polarizer is used to increase color saturation and contrast of digital pictures. It also enables the removal of reflection from non-metallic surface such as glass and water. With the new Low profile filter ring, it is suitable for usage on wide angle lens without vignette issue. Lens cap and additional filters can also be securely mounted.

SPECIFICATIONS

- Optics: High quality optical glass
- Housing: Low profile self-rotating ring
- Mounting diameter: 52mm to 77mm
- Filter thread: Yes
